

AI Career Counsellor - Project Report

Name: Priyansh Bhatt

Class: BCA,4th SEM

1. Introduction

This project is an AI-based system that recommends suitable career options based on user interests using NLP and Machine Learning.

2. Objective

To help users identify career paths based on their interests.

3. Abstract

Uses TF-IDF vectorization and Logistic Regression to classify text into career categories.

4. Tools & Technologies

Python, Scikit-learn, Streamlit, Pandas

5. Methodology

Dataset creation, preprocessing, TF-IDF, model training, prediction, UI development.

6. Results

The system successfully predicts career paths based on user input.

7. Advantages

Easy to use, fast, helpful for guidance.

8. Limitations

Depends on dataset, limited understanding of complex input.

9. Conclusion

Demonstrates how ML can guide career decisions effectively.
